

SUPERSTORE SALES & PROFIT ANALYSIS

Interactive Business Intelligence Dashboard | Microsoft Excel

Portfolio Project • 2014–2017 • Sample Superstore Dataset

Executive Summary Dashboard

A high-level view of sales, profitability, and business performance, designed to help users explore key metrics and trends through interactive Excel visuals.

\$2.297M	\$286.4K	12.47%	5,009
Total Sales	Total Profit	Profit Margin	Orders

Data source: Sample Superstore dataset. The dashboard summarizes U.S. sales transactions from 2014 through 2017.

Performance Overview

The detailed dashboard combines monthly sales and profit trends with category, sub-category, state, discount, and shipping-mode analysis. Slicers and a date timeline support interactive exploration.

Key dashboard components

Monthly Sales Trend	Tracks monthly sales and profit patterns across 2014–2017.
Profit by Sub-Category	Highlights differences in profitability across product sub-categories.
Sales by State	Maps sales distribution geographically across U.S. states.
Profit by Discount	Explores how profit varies across discount levels.
Sales by Shipping Mode	Compares sales across shipping options.
Interactive Filters	Order Date, Category, Region, Segment, and other slicers enable focused analysis.

Project Scope, Tools & Key Findings

Project objective

Transform raw retail transaction data into an interactive Excel BI solution that summarizes performance, reveals profitability patterns, and supports analysis by time, geography, product, customer segment, discount, and shipping mode.

Workflow & tools

Data preparation	Cleaned and organized the Sample Superstore data for analysis.
Data modeling	Structured fact and dimension tables in the Excel Data Model.
Measures	Created DAX measures for Sales, Profit, Quantity, Orders, Customers, Profit Margin, and year-over-year growth.
Analysis & visualization	Built PivotTables, PivotCharts, KPI cards, slicers, timeline controls, and dashboard navigation.

Key findings

- Total sales reached \$2.297M and total profit was \$286.4K, with an overall profit margin of 12.47%.
- Technology generated approximately \$836.2K in sales and \$145.5K in profit.
- The West region recorded approximately \$725.5K in sales and \$108.4K in profit.
- Furniture had a 2.49% profit margin, compared with 17.40% for Technology and 17.04% for Office Supplies.
- Texas recorded the largest state-level loss in the dataset, at approximately -\$25.7K in profit.

Skills demonstrated

Excel • Power Query • Power Pivot • Data Model • DAX • Data Cleaning • Data Analysis • KPI Design • Dashboard Design • Data Visualization

Note: This is a portfolio analysis of the Sample Superstore dataset. Findings describe the dataset and should not be interpreted as forecasts or causal conclusions.
